

BIOSECURE PRODUCTION AREA

The 'biosecure production area' includes the poultry sheds, the ranges used for free range production, the areas used for feed storage and handling, any dedicated staff amenities, delivery access routes and the area surrounding the sheds, including pick-up areas. The biosecure production area must have a perimeter fence or otherwise well-defined boundary (e.g. creek, vegetation) establishing a clearly defined biosecurity zone. Sections of the production area boundary may also be the property boundary. Free-range areas are within the biosecure production area but require additional entry requirements (see 5.1). A map of the biosecure production area must be kept on site (example below).

BIOSECURE PRODUCTION AREA

It is recommended that a copy of the map identifying the biosecure production area be inserted here.
